ARI Datatable - percent signs

Posted by TomJund - 2020/05/06 13:46

_____

Hi, I have some problem with database queries. I have a Data Table module with SQL queries for example:

SELECT * FROM tbl WHERE value LIKE {$REQUEST:val|empty:''}

Param value is sending from the text input form. The problem is, when I try to use percent sign, for example %123456789, then ARI Data converted it to 'f34567890' and sended to DB query:

SELECT * FROM tbl WHERE value like 'f34567890'

How to send requests like '%2222' '22222%' '222%222' etc ?

ps. i use ARI Smart Content Datable

==
