
No links when Data transformation is YES

Posted by TomJund - 2020/05/11 18:09

Hi, I use formatting value in the one column to add links. All links are displayed correctly only when "Data transformation" is set NO, but when i set it to YES, there are no links in the table (I use Revert data=YES to display charts).

Why links aren't displayed ?

Hello,

What option do you use to create links ("Columns settings -> Format", "Recognize links" or other)?

Regards,
ARI Soft

I have used "Columns settings -> Format" like that:
{ \$value }

\$value is an Integer.
When Revert data is equal NO, links are displayed, when switch Revert data to YES, aren't displayed.
