
formatting of columns

Posted by kraftgroup - 2010/08/31 14:37

Howsit...

In the column settings, how do I set the format if I want it to use for example accounting, ie \$ xxx,xxx,xxx.xx ?

Anything I type into the column settings just overwrites the entire column... Thanks

Currently 'Format' option from 'Column Settings' section can help add '\$' character before column value only, for this type column id in 'ID' parameter and type '\$ {\$value}' in 'Format' text box.

Thanks,

Any chance to get it to format it to xxx,xxx,xxx.xx with those settings?

Currently not, only if you place values in this format into CSV file.

Doesn't work though...

GChart, Column chart...

got | delimited

soon as you use , it bombs out and my 12million value changes to 12

Have set up the column settings, but that just changes the value name of the column, and not the data within it...

Thanks for the explanation, it's limitation of Google Chart API which is used by GChart widget. You can see Google Chart API for Column Chart here. It doesn't provide ability to format values or work with formatted values.

Damn...

Is there another part of Data Tables that would give me the interactivity of GChart? Need the hover function to show values...

http://code.google.com/apis/visualization/documentation/examples.html#interaction_example

<http://code.google.com/apis/visualization/documentation/reference.html#numberformatter>

Is there any way that you can code this into you extension?

We have updated the module. Download and upgrade it, please. New version provides 'Formatters' section for 'ARI GChart' widget. Set 'Column index' parameter to '1', 'Type' to 'Number' and enter 'prefix=\$' in 'Additional parameters' textarea. It applies 'NumberFormat' formatter to the second column.

When we paid the \$15 for this extension, we didn't think that the support would be this fanatical!!!!!!!!!!

You guys are awesome, thank you so much, this is really appreciated! http://www.ari-soft.com/images/fbfiles/images/ist2_437828_giant_smiley_big_smile2.jpg
