
URL in table column - solved

Posted by ulrabd - 2021/07/15 15:54

Hi, first day with ARI Data Tables. with lots of trial and error I got nearly what I want.
Remaining problem: in one of the columns i want text with URL.

URL in text looks like this:

`index.php?option=com_content&view=article&id=307:2020-mit-camper-nach-griechenland-in-die-badeferien&catid=156:2020`

In ARI table it modified to this:

`/index.php/tables/ari-data-tables/ari-example-travel?id=307:2020-mit-camper-nach-griechenland-in-die-badeferien&catid=156:2020`

Well, after a night with good sleep I look again at my data, as I could not believe ARI Data Tables does something so wrong...

My URL behind the text was wrong. I did copy/paste a travel list table from my website using the editor code mode and changed the result into a CSV file, but not looking at the resulting URL-code....

If the URL is like this

`http://familie-abderhalden.ch/index.php/reisen/griechenland/2020-badeferien`

it works as expected..... :kiss:

Hello,

The extension doesn't modify URLs if it is not configured in module settings (for example via "Columns settings -> Format" parameter). Could you provide a link to a page where the problem occurs and a temporary access to your J! backend by email so we can investigate the problem?

Regards,
ARI Soft
