
Show total records in table

Posted by amheng5 - 2021/09/13 21:14

Hi, is there any way to show total records to date at top of table under title? When I use pagination, and records exceed a 10/25/50 etc I would still like to show total records at the top of the table if all the records don't show on first page. I truly enjoy the latest ARI Smart Content component. I really like now you can export to excel. Thank you.

Hello,

The extension can show total records in footer:
