
Search Field Issue in ARI Data Tables: Author Not

Posted by larry34 - 2024/02/04 10:59

Hello,

The search field seems to have an issue.

I have created an HTML table in the 'ARI Data Table' format with the 'Show search input' option enabled. It's a list of books with the author's name and title.

When I search for the author WITHMAN, the search engine doesn't find it.

However, when I search for the word 'leaves' included in the title of his book 'Leaves of Grass,' it displays the corresponding line.

When I search for the name of another author (WERBER, for example, who is just above), it finds it.

Does anyone know why?

Hello,

Is it possible to see the problem anywhere?

Regards,
ARI Soft

Thank you for looking into this issue:

It's the same under Edge (121.0.2277.98), Firefox (122.0), Chrome (121.0.6167.140), and Opera (106.0.4998.66).

This also occurs on iPhone 8 (iOS 16.7.4).

Have a great day!

Of course :-)

my web page is there

I will send you the access codes by separate email.

The table doesn't contain any record with "WITHMAN" word so it is found nothing. The table shows all records and you can use browser's search (Command + F) to search something on the page.

Hello,

I don't understand why 'WITHMAN' is not found in the table when all other author names are present.

Additionally, I'm confused about the purpose of the search field in ARI Data Tables if we're supposed to use Ctrl+F instead. :S

We don't say to use Ctrl+F instead of table search input. We just suggest to use it to make sure the table doesn't contain any record with "WITHMAN" word and see that this is not a problem with search functionality.

Do you load data from a database or a CSV file?

Regards,
ARI Soft

Dear ARI Soft team,

I would like to sincerely apologize for the typo in my previous message. It seems I mistakenly typed "WHITMAN" instead of "WITHMAN." Please accept my apologies for any confusion this may have caused. :blush:

Perhaps it was a momentary lapse of attention, or maybe a touch of dyslexia brought on by the passage of time â€” who knows! In any case, I assure you it was entirely unintentional. :silly:

Wishing you all a fantastic day ahead, filled with laughter and productivity. And may all our keyboards remain free of such slip-ups in the future!

Warm regards.
