

Make values of a column clickable using urls

Posted by samik83 - 2024/03/14 09:01

Hello,

I would like to make values of a column clickable using the URL present in other column.
Let's assume this is my CSV table:

Author; Title; URL
autor1; publication1; https://www.test1.com
autor2; publication2; https://www.test2.com
autor3; publication3; https://www.test3.com

when importing the table, is there a way to let it looks like this?:

| Author | Title

| autor1 | publication1
| autor2 | publication2
| autor3 | publication3
=====

Hello,

It is possible. Could you provide your order ID by email?

Regards,
ARI Soft
