## Changing alignment for some columns

Posted by cfinch - 2010/10/05 05:39

---

Sorry, I am still getting comfortable with CSS. I have taken a look at many of the style sheets but I cannot find where to set the alignment for the text in my table.

For example, I have a simple table with only 3 columns. The table looks bad because the text for each field is left aligned. I want the first column to be left aligned, but the others to be center aligned.

Can you point me in the right direction of where I might make this setting?

I am using the ARI Datatables widget.

Thanks in advance

Hello,

Set 'Advanced styling' parameter to 'Yes' and enter the following code into 'CSS Styles' textarea:

```
TABLE{$id} TR TD
{
  text-align: center;
}
```

```
TABLE{$id} TR TD.ari-tbl-col-0
{
  text-align: left;
}
```

What i have to replace in thir example?

TABLE -> my table name?

id -> colun name?

---

Nothing should be changed. Put the above code to 'CSS Styles' parameter.

What do you mean with 'CSS Styles' parameter? The css templates in the smart content component?

---

This topic about ARI Data Tables extension, not about ARI Smart Content.
