Data Visuliser & Data Tables
Posted by g4lch - 2010/10/22 08:44
_____

In the examples I can see that there is a bar chart that has several elements grouped.

if I have two tables coming from a database

select Convert(WeekNumber,CHAR(2)),Sales from `Christmas_Reporting_Core`.`Christmas_Stock` WHERE Type=1 ORDER BY WeekNumber

and

select Convert(WeekNumber,CHAR(2)),Stock from `Christmas_Reporting_Core`.`Christmas_Stock` WHERE Type=1 ORDER BY WeekNumber

What should happen is that these two calls would show two column groupings

how can I make the second SQL call !! ie recover the second data set and add this to the graph.

Regards
Mark

Hello,

Try to use the following SQL query:

```
SELECT
  CONVERT(WeekNumber, CHAR(2)) AS WeekNum,
  Sales,
  Stock
FROM
  `Christmas_Reporting_Core`.`Christmas_Stock`
WHERE
  Type=1
ORDER BY
  WeekNumber
```

and set 'Revert data' parameter to 'Yes' in module settings.

Regards,
ARI Soft

_____

Check that you use the latest version of 'ARI Data Tables' module (v. 1.3.11).
