## Sorting Numbers

Posted by arlmasters - 2010/10/29 01:39

---

Hi

Really excellent module, just what I'm looking for.

A quick question though - how can I sort a column of numbers so that 5.00 is reflected as being smaller than 10.00 when sorted in ascending order. At present, the sort will start with 10.00 then 15.00 then 20.00 then 25.00 then 5.00.

Appreciate any help I can get on this, I have "sorting type" set to "numeric"

Thanks  
Andrew

Hello,

Could you provide link to page where we can see this issue and if it's possible temporary access to your Joomla! backend by email?

Regards,  
ARI Soft

Thanks, I seem to have solved the problem by first using the text function in Excel to create leading zeros in the appropriate column in the csv file. Although when saved the leading zero disappears, it seems to retain the format once used in ARI Data Tables.
