
Show Entries

Posted by vhousos - 2010/11/03 14:43

Have a good evening from Greece.

A few days ago, I installed ARI Data Table succesfully.

I have formated an excel list, with details of some clients.

I exported it to UTF-8 csv file and gave the appropriate parameters to the joomla module ARI Data Table.

I have the following problem, which I cannot solve.

As you can see to the following page,

http://nazo.housos.gr/index.php?option=com_content&view=article&id=140&Itemid=58

when I change for example the number of the "Show xxxx Entries" from 10, to 50, the table extends to the right.... and the most right column became invisible.

Can anyone help me the sooner as possible?

Thanks in advance....

Hello,

Part of the table is hidden because site template uses fixed width for content area. Some columns contain value which contain large text without spaces and it do width of the table is greater than width of content area. It can be fixed in several ways:

1. Change font size of the table. For this the following CSS rule can be used:

```
.dataTables_wrapper
{
    font-size: 9px;
}
```

2. Add horizontal scrollbar to content area:

```
body .floatbox
{
    overflow-x: auto;
}
```

3. Show content out of content area:

```
body .floatbox,
body div#wrapper div.wrapper-br
{
    overflow: visible;
}
```

Thank you for your quick reply

Can you please specify to which .css file I have to make the changes you sent me?

You can type this code into "CSS Styles" parameter in module settings or add it to site template CSS file.

It works.

Thank you very very much...

Yours sincerely
