## Suggestion for forms component to link to?

Posted by pheitman - 2010/11/03 21:05

---

I wish ARI Soft produced a forms component - it would complement your Data Tables nicely. Do you or does anyone have suggestions on a forms component that I should use along with the Data Tables? I'd like to be able to link from the table to a Details form that would provide all of the fields from the object that is summarized in the row of the table. I need to be able to support forms that map to multiple back end tables. My Data Table is a join over several tables.

Thanks in advance,

Peter

Hello,

You can try to integrate the module with a 3rd party extension which can display table row data by key field id. The module can generate link to this extension and add key id as GET parameter to link.

Regards,  
ARI Soft
