
Column Link to external website

Posted by arlmasters - 2010/11/09 02:35

Hi

I'm trying to set up a table with the first column listing a country name and then the second column providing a link to the website of the Central Bank of that country.

I have created a csv file, column one with the country name and column two with the following:

=====

Hello,

Use the following value in CSV file:

Central Bank

instead of

=====

Re:Column Link to external website

Thanks

The value in my csv field was correct, ie. included the closing ", but setting recognize link to yes was creating the problem. It now works having set recognize link to no.

Two further questions -

1. Is it possible to open the link in this second column in a "new window with browser" rather than in the parent window, and if so how?
2. I don't seem to be able to "unset" the sorting facility in the weblink column (2nd column) which is rather meaningless, even when I delete it from the columns settings parameter (Column Index, Sorting Type, Sorting Order). How can I resolve this?

Regards
Andrew

PS - This is a great product, keep up the good work!

You are welcome. Regarding your questions:

1. You can add target="_blank" attribute to anchor tag in CSV file. It will look like:

Central Bank

2. Could you specify what table widget you use ("ARI Table Sorter", "ARI Data Table", "ARI Tiny Table")?

Hi

Widget = ARI Data Table

Thanks for the prompt response, much appreciated.

Configure parameters like on screenshot below that disable sorting for the second column:

Hi

The first column, country name, I want to sort so I have set it to string and ascending. However, when I add the weblink 2nd column, even when this latter column is set to none and none as per your attached image, the end result is a Table where the 1st column (countries) is not sortable, and the second (weblinks) is sortable. When I delete the second column from the settings altogether, so that just the first is there, the result is a table where both columns are sortable. Rather weird.

Hope the above makes sense.

Regards
Andrew

Could you provide screenshot of module settings page or temporary access to your Joomla! backend by email that we

can investigate this issue?

Hi

I'll try to make further contact in the next few days, just rather busy at the moment and my website is a hobby, so the day job keeps me busy unfortunately. Appreciate your help.

Another quick question -

When using any of the charts, I notice the chart title I insert is fine when viewed on my PC and laptop in terms of font style (arial or whatever the default is), however, when viewed on other PC's and laptops, the font style seems to change.

I can see that one can set the font size in the module at the backend, but is there someway to ensure that the font style is consistent regardless of what machine or what browser is being used?

Regards
Andrew

Hello,

It is strange because the module uses the same font size for all machine. Could we see problem somewhere?

Hi

Attached, a Word doc with 2 PrtScs - the first showing a much larger font size on one laptop and the other a smaller font size on another laptop. I have also noticed a different font style on yet another PC, a more freestyle script, letters all joined as if handwritten.

Hi

Regarding my earlier query - not being able to "switch" off sorting for some columns - attached a file with PrtScn of the backend showing the settings. Only have one column included but all are sortable, if I add others, sorting of the first column is impossible.

Regards
Andrew

Hello,

If you want to disable sorting for some columns in "ARI Data Table" widget, specify column name or zero-based column index in "ARI Data Table -> Columns settings -> Column index" field and set "ARI Data Table -> Columns settings -> Sorting type" to "None" for this column. Regarding problem with font size, unfortunately we can't reproduce it on our test server and it's hard to investigate it by screenshots, provide link to page where we can see this problem that we can reproduce and investigate it.

Regards,
ARI Soft
