## Hide first coloumn and make heading of second

Posted by tommypetter - 2010/11/24 18:54

---

Hi!

I have a CSV file with five coloumns. The first insert is an article category number that doesn't need to show up in the table, and the second insert is the name of that product category. The name should appear as heading above that group, and the name should be hidden from the coloumns. I don't know if anyone understands this... How do I configure ARI Data Tables to achieve this?

Tommy

Hello,

Currently the module can't hide columns from CSV file, but we can add this feature within 24 hours. About grouping, the module can't group rows.

Hello,

If you could add that feature it would be fantastic. Can the module group coloumns?

Hello,

Download and upgrade "ARI Data Tables" module. New version provides ability to hide specific columns. Use "Columns settings -> Columns settings -> Hidden" parameter for this purpose.

Hello,

I want to say thank you very much for the upgrade, it works like a charm. I am very grateful for your excellent support!

Hello,

Use "Columns settings -> Columns settings -> Hidden" parameter for this purpose.
