## Changing Theme Colors?

Posted by shamrockkllc - 2011/01/03 03:18

---

I am using the themes . . . but I need to modify the colors.

Is there anyway to do this, and if so, how . . . details please, I am new to this stuff. <http://www.ari-soft.com/images/fbfiles/images/q1.jpg>

Hello,

Place the following code into "CSS Styles" parameter in module settings:

```
/* odd row */
.dataTables_wrapper TABLE.display TBODY TR.odd TD
{
  /* background color */
  background-color: red;

  /* text color */
  color: yellow;
}

/* even row */
.dataTables_wrapper TABLE.display TBODY TR.even TD
{
  /* background color */
  background-color: green;

  /* text color */
  color: blue;
}
```

Regards,  
ARI Soft

I tried that and no change...

---

Steps: in backend went into components->ari smart content->CSS Template\_> assigned it a name (table override),  
pasted the code you indicated, checked enabled...it didn't update...  
I then hit sync...no luck...

so...I ended up editing the css included with the plugin to get it to work...
