
ARI DATA external database connect to Sybase ASE

Posted by jaemoonlee - 2011/01/12 23:32

Hi

IIS6 + mysql 5.2 + Joomla 1.52 + PHP 5.3.3

Using Ari Data module, needs to connect to Sybase ASE.

filled up then can't connect bring data.

any document or support manual?

Hello,

It requires installation of Sybase PHP extension. External database also should accept request from your server.

Regards,
ARI Soft

Through Ari Data Tables. I am trying to connect to an external database. It says:

â€¢Untranslated Strings Diagnosticâ€¢

ARI DATA TABLES: COULDN'T CONNECT TO EXTERNAL
DATABASE. AriDataTablesDataSqlModel::getDataFromExternalSource()

â€¢Untranslated Strings Designerâ€¢

/home/cmi1997/public_html/modules/mod_aridatatables/includes/kernel/DataTables/Models/class.DataTablesDataSqlModel.php

ARI DATA TABLES: COULDN'T CONNECT TO EXTERNAL DATABASE.=ARI Data Tables: Couldn't connect to external database.

Hello,

Read this post please. Is necessary PHP extension is installed on your server? External Sybase database is configured properly that accepts remote connection?

Regards,
ARI Soft

Do you have any more documentation on the PHP extension? The link you inserted just goes back to this same thread. Also, my database is not Sybase, it is MS SQL.

So, the problem I was having is that the external database was an MSSQL database, and I was on shared Lynux server. I changed over to a dedicated windows server, had them install the PHP extensions you recommended, and everything connected immediately.

Hopes this helps someone else.
