## Different sizes - possible to modify?

Posted by nick - 2011/03/11 09:06

---

I know that Ari Image Slider works well with same size images - with different sizes you can see the previous image behind if the new one is smaller. I was wondering if its possible to modify this behaviour? Would it be possible to add a big white css border to the bottom that hides the image beneath? border-bottom:xpx  
Thanks

Hello,

Currently it is impossible, it requires to modify javascript code. We will try to add support of image with different size in a future release.

Regards,  
ARI Soft
