
Cannot link the image on ARI Image Slider

Posted by reezal - 2011/04/17 16:15

Hi,

I just installed ARI Image Slider to my page. But how can i link the image? I have set the configuration at ariimageslider.ini as below:

1design-competition.jpg="This is a bread"

1design-competition.jpg="http://www.cworksmobile.com/ddec/images/stories/design-competition.pdf"

coffee.jpg="Coffee"

Actually i just only want to link the 1design-competition.jpg

Hope you can help me to solve the proble....Thanks..

Hello,

Have you placed INI file to image folder?

I though INI file should be on module folder...now, the problem was solve....

thank you very much.....

I have installed the ARI Image Slider on a 3.1 site and I have installed the ini file. Below are the contents of the INI File that I have for testing. The pages are not quite ready for the links which is why they are just showing defaults.

HPFlow.png="www.google.com"
Supplies.png="www.ari-soft.com"

HPFlow.png="HP Flow CM Professional"
Supplies.png="Ink and Toner Supplies"

These images are not showing up as linked. The URL where the Slider is located is www.fleximaging.com/v2.

How can I get this to work or is this not supported in 3.1?

It seems you use modified version of "ARI Image Slider".

Upgrade the extension to the latest version and if the problem still appears, we can investigate it if you provide a temporary access to your J! backend by email.

Hello,

I am using template Joomlage0072 (on Joomla 3.2) - Trends, which has build in ARI Image Slider.
I can put in one folder more pictures and slider is changing pictures well.

But I don't know how to redirect from each picture in slider to another web page.

Thank you for your help.

Hello,

Redirect links can be defined in INI file. See "Description" section on module settings page, it contains link to sample INI file and instructions how to use it.
