Set correct value for "Width" parameter in module settings. For example set it to 980

It seems "Width" is set 200. We can investigate the problem if you provide temporary access to your Joomla! backend by email.

It is Joomla! index.php file. If you have any difficulties to open page with the slider in a browser and save page files in browser then upload your site to an online server and provide link to page where we can see the problem that we have ability to help you.

We no need any Joomla! files or installation package. We need HTML source with javascript, CSS and images files of the page with the slider. You can read how to save them here.

I seem to be having a similar issue as well. When no images are loaded, the "box" is centered, but once i load an image it become off center. I have the dimensions set to that of the images (980x252), this has it mostly centered, but not quite.

Any assistance would be appreciated.

Thanks for the quick reply.

I have set the width to 940, however it is even more off centered now.

Thanks for your help.

It looks fine in your screenshot and it also loads fine on my machine us IE. The problem must be with the Google Chrome Browser then, because its still off centered in Chrome.

Thank you again.
