
Cannot upload ini file to link pictures.

Posted by Ameno - 2011/04/28 20:54

The image slider is working correctly with all my pictures, but I cannot link them. I've created the .ini file, but I cannot for the life of me upload it to Joomla. Can anyone help me here? When i try to upload it to the folder my pictures are in, it says file type not supported. I even went into the global configuration settings and added .ini to file types accepted and it still will not let me upload it.

Thanks.

Use a file manager extension instead of Joomla! media manager for uploading INI file. For example use eXtplorer extension.

Hi there, IÒ'm having same problem, then can you recommend a site to get this extension?
Thanks in advance,
Juan.

Hello,

You can find eXtplorer extension here.
