
Images not showing

Posted by poisson992 - 2011/05/05 19:01

Last night, I put all the images in the root folder and specified the path in the parameters and the slider was working fine. However, today the slider isn't working and the attached image keeps showing. I don't know what went wrong or what I changed. I don't remember tweaking the slider's settings. Any help would be greatly appreciated.

Hello,

Provide link to page where we can see the problem.

Regards,
ARI Soft

Thank you so much for replying. I have attached the image. I am working in local host so I have no idea how to provide the link.

Can you just tell me where I might need to look in order to change it back to what it was

Okay I remember I switched from the default style to square style. Is that what is causing it? How should I revert back

It can be a conflict with a 3rd party extension. Send page files of the page with the slider by email that we can investigate the problem.

Thank you.
I have sent the email.

I deleted the menu and its working now. Do you know why the menu was interfering with it?
