
One link to all images

Posted by krzakx - 2011/05/29 18:55

Hi everyone!

How to modify *.ini file if I want one constant link to all images ?

Thanks, Kamil

Hello,

You can specify the same link for all images. INI file will look like:

```
image_01.jpg="http://www.domain.com"
image_02.jpg="http://www.domain.com"
image_100.jpg="http://www.domain.com"
```

Thanks for reply.

But what if I am going to updates some times the photos in specific folder - they maybe be different. I need every time edit *.ini file?

That's too bad, I had the same question. It would be very nice to have a parameter in the back end where you can set the link / url one time, without the need to update when the image files have changed. Of course this can only work in case you want to link all images to the same destination ;)

Hello,

Download and upgrade "ARI Image Slider" module. The latest version contains "Default link" parameter. It can be used to specify default link.

That's great!

Thanks, Frits

I have the latest version of ARI image slider, I input the default link, however when I click on the image it does nothing, also when I hover over the image it doesn't change the mouse icon either. Please let me know what the problem is. The site is <http://www.nugensmokes.com>
