Keyboard arrow (forward/backward) not crossbrowser
Posted by badwolfff - 2011/05/29 20:25

_____

Hi,

Firstly please allow me to thank you for your fantastic module. It is easily the smoothest slideshow module out there and with just the right number of features and an elegant presetation. I am also interested in some of your other apps and I will soon start buying what I need for my clients.

Now, to the problem! As I said the module works perfectly BUT, the keyboard forward/backward keys work ONLY in the firefox browser. In IE, Safari, Chrome and Opera when you click on the arrow keys nothing happens. In firefox the slideshow moves forwards/backwards as per the key clicked.

You could check that this is true by trying your own demo page (as my site is still in my localhost directory): http://www.demo2.ari-soft.com/joomla-image-slider.html

Please could you assist?

thanks in advance.
Sunil

_____

Hello,

Download and upgrade the module please. It should help.

Regards,
ARI Soft
