Lightbox refusing to work ARI Image Slider + ARI P
Posted by kaycee85 - 2011/06/02 00:44

page: http://majesticimaging.org/in-development/studio

I've been trying for hours to get a lightbox to work. I'm now using the commercial version of ARI PrettyPhoto.

Problem #1: I realized that the necessary 'rel' attribute hasn't been showing, no matter what lightbox I choose or whether or not it's installed.

Problem #2: Even if I hack the code to include the 'rel' attribute, there's still nothing clickable that brings up a lightbox.

Problem #3: I want the images in the slider to be limited to 504px, even though they'll be 800px wide in the lightbox. (I understand they all need to be the same size for the ARI Slider.) I've set a CSS max-width on the images, but they're only CROPPED instead of resized-- very odd. How can I resize them to 504px wide max?

I've attached the slider settings.

Thanks,

Magestyx

_____

The image was too tall and exceeded the height limitation because there are so many settings so I put it at:
http://majesticimaging.org/temp.jpg

Please help!

Thanks.

I've sent all the login info for the site to you.

I've installed the ARI PrettyPhoto Module and both plugins-- none of them seem to run the lightbox.

Hello,

Try now please. It was the problem with module configuration. Integrated lightbox can show something if images are associated with links in INI file or "Use thumbnails" parameter is set "Yes". We set "Use thumbnails" parameter to "Yes" that the module generates thumbnails automatically with width equals to 504.

Regards,
ARI Soft
