
ARI Slider in Safari

Posted by deewhyweb - 2011/06/08 15:41

Hi,
I recently purchased the ARI slider module for Joomla and have a problem using it in safari. I have another jquery slider running on the same page, so no doubt it's conflicting with this, but they both run fine in firefox and IE.
Any idea how I can sort this conflict out?

Thanks,
Philip Hayes

Hello,

Provide link to page please where we can see the problem.

Regards,
ARI Soft

Hi, you can view on the test site, ballyseedy.deewhy.ie
The ari slider is at the bottom of the page, you'll see it working in ff.

This problem with site template. It loads jQuery javascript library and doesn't call jQuery.noConflict(); method. You can fix it by yourself or provide temporary access to your Joomla! backend by email and we will help.

Thanks for your quick response on this, great support from you guys.
That did the trick.

For anyone else having this issue:

Because I was calling another version of jquery in my template file, I needed to add noconflict after with this line:

```
$.noConflict();
```

When calling jquery in my code, when using my other library I had to replace the "\$" with "jQuery", e.g. change \$(window).load(function() to jQuery(window).load(function()

Thanks,
Philip

One note, jQuery.noConflict() method is required to call because MooTools library is loaded on your site.
