
problem with thumbnails and animation

Posted by opek - 2011/06/17 15:40

Hi,

I've got problem with thumbnails. When I enable them the main images are not shown. When i Disable them, main images are shown but the slideshow is not working.

site <http://www.gorymoje.com/index.php>

Hello,

If "Use thumbnails" parameter is set to "Yes", the sliders shows thumbnails and open original images when a user clicks by thumbnail.

I put two Slider modules to show You what the problem is.

You can see on my site, that when thumbails parameter is set YES original image is not opening (second ARI Image Slider).

When I set no-thumbnails, then original images are shown, but the slider is no working... there is no automatic animation (first ARI Image Slider).

Set "Manual advance" parameter to "No" that enable auto rotation mode. About issue with thumbnails, this problem with RokBox plugin. If you set "Lightbox integration" parameter to "None", the module should work fine. If you need RokBox integration, check that the latest version of the plugin is installed on your site.

Regards,
ARI Soft
