
Important

Posted by Partizan - 2011/06/17 16:28

Hi and thanks

please add option to choice load jquery from local or CDN(CDN option to choice http or https)

i need to this option and now i manually change it.

because in the middle east when loading js file from none https CDN receive data in not compressed mode
(The majority of requests coming from some Middle Eastern countries donâ€™t
have a valid Accept-Encoding header) and gzip mode not work.. :angry:

sorry for several time edit and for my bad english.

and thanks for your good work.

Re:Important

Posted by admin - 2011/06/17 20:00

Hello,

Download and upgrade the module. New version of the extension contains new parameter called "Load jQuery method".

Regards,

ARI Soft

Re:Important

Posted by Partizan - 2011/06/17 20:22

Thanks for everything

Your work is admirable :laugh:

=====

Re:Important

Posted by Partizan - 2011/06/17 20:43

But the problem is not resolved :dry:

when loading from local error 404 Occurs, and google CDN mode only http protocol and not option to select https mode
:(

=====

Re:Important

Posted by admin - 2011/06/17 20:50

Sorry for 404 error. Forgot to copy jquery library to installation package. Download and upgrade the module again please.

PS: The module detects automatically if page is loaded through https protocol, jQuery will be loaded through https, in
other case it is loaded through http protocol.

Regards,

ARI Soft

Is it possible to add force HTTPS mode

=====

Re:Important

Posted by Partizan - 2011/06/17 20:54

I need very much to this feature

=====

Re:Important

Posted by Partizan - 2011/06/17 20:58

and this module Conflict with ari sexy lightbox when choice jquery 1.5.1 ver and i need this version to work corectly
joomla Community polls..

=====

Re:Important

Posted by admin - 2011/06/17 21:00

The module is open source and it can be modified for your needs. The second solution, disable jQuery loading in module settings and it can be loaded in necessary way in site template or with help 3rd party extension.

Regards,
ARI Soft

Re:Important

Posted by Partizan - 2011/06/17 21:13

and loading both ver of jquery <http://www.ari-soft.com/images/fbfiles/images/1-3ac276c0d28fa708fe2950c43e62fbb8.png>

=====

Re:Important

Posted by admin - 2011/06/17 21:19

The module loads only one version of jQuery. The second version can be loaded by another module.

Regards,
ARI Soft

=====

Re:Important

Posted by Partizan - 2011/06/17 21:21

The second version load in ari sexy lightbox and when disable this ARI Sexy Thumbnails not work and open image with out popup

=====

Re:Important

Posted by admin - 2011/06/17 21:25

If several extensions are required jQuery library (Community poll is required it too and it's implemented in those way that it can't work when several instance of jQuery are loaded), we can recommend to disable jQuery loading in all extensions and load jQuery only once in site template. It increases performance and helps to avoid conflicts for extensions like Community poll.

Re:Important

Posted by Partizan - 2011/06/17 21:30

I edit this file (class.ImageSlider.php)
and add https at the first of this line `ajax.googleapis.com/ajax/libs/jquery/` . `$jQueryVer . '/jquery.min.js'` and when refresh page and check with Yslow see the address change to `http://https ajax.googleapis.com...`

how to solve it <http://www.ari-soft.com/images/fbfiles/files/class.txt>

Re:Important

Posted by admin - 2011/06/17 21:34

Replace the next code:

`ArImageSliderHelper::getProtocol() . 'ajax.googleapis.com/ajax/libs/jquery/' . $jQueryVer . '/jquery.min.js'`

with the following code:

```
'https://ajax.googleapis.com/ajax/libs/jquery/' . $jQueryVer . '/jquery.min.js'
```

Partizan wrote:

Is it possible to add force HTTPS mode

Thanks ARI for the great module.

I'm sure there is a better way I could have done this.

The browser was whining about non secure items on the page.

It wasn't so noticeable in Firefox but Google Chrome had a nice RED https which caused me to look into the issue.

I looked at the page source and the ajax.googleapis was in http instead of https.

I grep't the Joomla Directory and found the api in 2 places.

in the following directory
modules/mod_ariimageslider/mod_ariimageslider/kernel/ImageSlider

there is file called class.ImageSlider.php

In line 41 I changed
\$doc->addScript('http://ajax.googleapis.com/ajax/libs/jquery/' . \$jQueryVer . '/jquery.min.js');
to
\$doc->addScript('https://ajax.googleapis.com/ajax/libs/jquery/' . \$jQueryVer . '/jquery.min.js');

I simply added an s to the http.

I am no programmer and I'm not sure I wasn't getting the error for other reasons but this did stop the browser from whining about non secure items on the page and chrome has the soothing green https now :)

Re:Important

Posted by admin - 2011/06/22 08:28

Hello,

It seems you use old version of the module. The latest version detects http and https protocol automatically.

Regards,
ARI Soft

WOW thank you very much.

You either did a lot of coding in the last 2 weeks? Or I somehow download your product from someone who was mirroring an older version. I'm not sure.

I just downloaded it within the past 2 weeks.

As I said.

I am no programmer and yet I it got rigged so it would work.

With my ignorance concerning coding, who knows what issues my rigged way could cause down the road.

I am upgrading now.

Your way looks much more elegantly done.

Thanks again for your fast response.
