
JA Purity ii and ARI image slider

Posted by bench1254 - 2011/06/20 19:21

Can not seen to get the images to show up. I have switched templates to ja-purity & others -- and the problems goes away, which leads me to believe it might have something to do with the mega menu or T3 framework. Can not seem to target the source of the problem.

I will send url and password to access. Email??

Thoughts.

Site template or 3rd party extension overrides base working directory.
