
Center images & leftover images

Posted by cveile - 2011/06/30 16:34

Hello!

Thank you for this wonderful application!

A couple of issues...

- 1) can we center images horizontally and vertically (in the instances of differing image sizes)?
- 2) Also...there also appears to be some leftover image fragments when a fuller sized image goes to a smaller image. is there a way to clear that out? If not in this module, does one of your other sliders?

Here's an example:

Hello,

Regarding to your questions, that is required custom development. The module works correctly with images which have the same size.

Regards,
ARI Soft

so there isn't a way to avoid those issues? May have to look elsewhere, I guess

The module is based on Nivo Slider jQuery plugin and the plugin can work correctly only with images which have the same size.

How did you get the images to rotate/carousel?

Also, once you click on an image can you advance via the lightbox?

thanks,

-Keith

Keith,

I actually ended up using a different module - Ari's image carousel, I think...The old one didn't work with what I wanted, so I punted and went in a slightly different direction...

as to the moving in the lightbox, that's a question for the admins...
