How can I make text easier to change for users

Posted by Gore - 2011/07/04 12:42

_____

Hello,

Thanks for your good component. I design webs to another persons and I would like to Know how can I make easier to change the gallery text.
I can change it in ariimageslider.ini, but I think it is hard to the other people...

-What software can they use to edit ariimageslider.ini? I use Dreamweaver but this people have not any similar, they can use windows notes, but when you save, it give problems with accents or spanish characters... Any software sugestion?

-There is a better way to my users can edit the texts? Perhaps I can write in ariimageslider.ini a call to a text in Joomla article?

Thanks! Best regards!

_____

Hello,

If you want to use non-English characters in INI file, save it in UTF-8 encoding without BOM. We can recommend to use NotePad++ text editor.

Regards,
ARI Soft
