## Slider Covers Dropdown Menu

Posted by colivia - 2011/09/02 04:21

---

Hello, I really like your slideshow module for this Joomla 1.5 site I manage, however, I am having trouble with it.

When the slider module transitions to the next graphic, it hides the drop down menu if it is visible. Users can't navigate the site.

This is a huge problem, but I'm sure is a simple fix.

You can view the site at [www.gocoaches.org](http://www.gocoaches.org)

Any help would be appreciated.

Thanks.

Hello,

Add the next CSS rule:

```
body .row-top-menu
{
  position: relative;
  z-index: 20000;
}
```

Regards,  
ARI Soft
