## Images not displaying correctly (blurred colors)

Posted by Malik - 2011/09/04 13:09

---

Hi,

I'm having issues when setting up ARI Image slider. My jpg pictures are not displaying correctly : the image is altered by parasitic colors :

[http://www.ari-soft.com/images/fbfiles/images/Capture\\_d\\_e\\_\\_769\\_cran\\_2011\\_09\\_04\\_a\\_\\_768\\_\\_14.png](http://www.ari-soft.com/images/fbfiles/images/Capture_d_e__769_cran_2011_09_04_a__768__14.png)

Could you please indicate me how I can configure this in order for it to work correctly ?

Thanks a lot for your help,

Malik

Hello,

Try to open images which you load into the slider in a browser. If they are shown correctly, provide link to page where we can see the problem.

Hi,

Thanks for your reply. Images are shown correctly when I open them in a browser. The link is [www.flatangel.fr](http://www.flatangel.fr). Do you need access to my backend ?

The direct link for the picture is :  
[http://www.flatangel.fr/images/slide2/img\\_4160.jpg](http://www.flatangel.fr/images/slide2/img_4160.jpg)

Thanks,  
Malik

What browser do you use? We have checked the slider in IE 9, Google Chrome, FireFox 3-4 and it works fine.
