
Removing shadow and making new border

Posted by davidfowkes - 2011/09/09 19:42

Hi, I am using ari image slider to give a rotating slide show. I have removed the default drop shadow and am trying to replace it with a border, and padding of 4px all the way round which is supposed to expose a grey background of #dddddd, with borders as follows:

```
border-top:1px solid #eee;
border-left:1px solid #eee;
border-bottom:1px solid #bbb;
border-right:1px solid #bbb;
```

I've got the borders doing the right thing but...

I can't get the image to position itself appropriately. Can you advise please.

the page/s concerned are

http://www.franziskaschenk.co.uk/index.php?option=com_content&view=article&id=155&Itemid=52

I suspect I need to adjust the position of the background image but I can't see how?

Hello,

Add the next CSS rule:

```
div.nivoSlider
{
border: 4px solid red !important;
}
```

Regards,
ARI Soft

Thanks but the borders I want are: border-top:1px solid #eee;
border-left:1px solid #eee;
border-bottom:1px solid #bbb;
border-right:1px solid #bbb;

The border is not the problem, it is the position of the image, I want 4px all around so it looks like all the other images on the site.

Use the next CSS rule:

```
BODY DIV.ari-image-slider-wrapper
{
  position: relative;
  margin: 0 auto;
  overflow: hidden;
  border:2px solid gray;
  padding: 2px 4px 4px 2px;
}
```

this also answered a question of mine.
thanks a lot.

maybe you could implement just a little bit more information in the general description or the tooltip :)

best regards
