
Using \"Lightbox\" for certain links only

Posted by mbaith - 2011/09/30 02:07

Folks - We have specific "image slider" links that we wish to load into lightbox, while other links should simply load into the parent frame.

Is there a way to accomplish this via the ini file & or module?

Thx.

Hello,

We have updated the module. Download and upgrade it. New version can skip lightbox integration for links from INI file which contains "skip_lb=1" request parameter. For example if original link is <http://www.mysite.com> use the next link http://www.mysite.com?skip_lb=1 to skip lightbox integration.

Folks - Thanks, but no dice:

Updated "image slider" as instructed, but the inclusion of the "skip_lb=1" string for one link, seemingly excludes all others contained within the ini as well.
