
Joomla 1.7

Posted by vano - 2011/10/08 06:18

Hello i have install ari image slider but dont know how to start, i mean.

1.-I dont know how to upload the images and the directory or folder where i have to place them to be show in the ari module.

I dont know wich path to use in joomla 1.7

2. I am using MAC, could be that the problem for .ini files

=====

Hello,

1. Upload images to any Joomla! folder or sub-folder and specify relative path to this folder in module settings. Images can be uploaded with help a file manager extension like eXtplorer.

2. INI is a simple text file and it can be created on MAC.

Regards,
ARI Soft

Done !! I create a new folder in the template I am using , images, but I dont know how to fill corrects values , Is no a tutorial for this extension?

Also yes was easy to create .ini

Thanks

And sorry still donÒ't see anything

Documentation can be found in "Description" field on module settings page. Each parameter in module settings have tooltip with description. We can investigate the issue if you provide a link to a page where we can see the problem and temporary access to your J! backend by email.
