
Ari Slider out of position

Posted by xmcamino - 2011/11/16 04:31

Hi friends!

1. My Ari Slider does not appears into my custom position called 'usermac'. What happen? Could you help me, pls?

You can see it in www.santamargarita.edu.pe/cms

2. I dont know why Ari Slider does not appear in the same position in Intenet Explorer and Firefox. How can I fix it, pls?

Regards,

MAC

Hello,

We see slider on provided page in "usermac" module position:

Hello,

...but the usermac position is not that. The right position should be behind the slider not in front (you can see another image as an example).

What about the question #2?

Regards,

MAC

This is "usermac" position. You can see available module positions by this link.

About question #2, what IE and FireFox version do you use? The slider is shown fine in FireFox v. 8.0.

You are right. This is the template and this is the correct position, but when you see de web page in IE or FireFox, the slide appears moved. I use IE 8 and Firefox 3.6.24

Regards, MAC

Provide a screenshot where we can see the problem. The slider looks like on provided screenshot in IE 8 and FireFox 8.0 on our side.

If you want to show the slider instead of "banner" image, you can add the next CSS rule to "CSS Styles" parameter in module settings:

```
body div#usermac
{
padding-top: 65px;
margin-left: -8px;
}
```

But currently the slider is shown into "usermac" position and it is not shown instead of "banner" image because it is implemented in this way by site template developers.

<http://www.santamargarita.edu.pe/cms/slider.JPG>

I wrote the new CSS rule and now I can see the slider in the right position in Firefox, but not in IE.
I appreciate your help.

Try to add the next CSS rule:

```
body div div#usermac
{
*padding-top: 0;
}
```

Ok, its works good, but now the dynamic menu is behind the slide in IE. In Firefox is very very good.
Thanks so much!

Re:Ari Slider out of position

Posted by admin - 2011/11/16 16:11

Add the next CSS rule:

```
BODY DIV#top_menu
{
  position: relative;
  z-index: 2;
}
```

Regards,
ARI Soft

You can see the screenshot of:

- Internet Explorer: <http://www.santamargarita.edu.pe/cms/slider1.JPG>
- Firefox: <http://www.santamargarita.edu.pe/cms/slider2.JPG>

About the last CSS rule you say me:

BODY DIV#top_menu

```
{  
  position: relative;  
  z-index: 2;  
}
```

I have preferred delete it, because when I add this code, in IE and FF appears a black rectangle over our shield (logo)... and when the images slider refresh, the last image appears over the dynamic menu...

Thanks!

Provided CSS rule works fine for us, we have checked it in FireFox 8.0 and IE 8 and 9. In any case, this problem with drop-down menu, we can recommend to contact site template developers that they provide fix for site template drop-down menu.

Hello,
I have seem the slider appears in the correct position in the new versions of browsers (IE8, IE9, FF, Chrome) but it appears out of place (10 cm to the right) in Internet Explorer 7. Could you tell me how can I fix this, pls?
Regards,
MAC
