
Images not loading/ jquery load

Posted by isarstyle - 2011/12/02 20:26

Hi Ari-soft Team,

i have a problem with my homepage image slider.
You can find the page here:
www.isarstyle.com

everything worked well, but now i started to optimise the jquery loads to load it on my joomla 1.7 page in general, and i think the ari image slider wants to use it earlier than its loaded by the google apis.
i embed the jquery version 1.6.

i hope you can help me, because i really like your image slider.

Best regards,

Friedrich

Hello,

Your script loading optimization plugin loads nothing instead of necessary javascript files.

Hello,

found out the Google Ajax Api Plugin did not work well. Now after inserting jquery manually everything works fine again.

Thanks for the fast support though.

Best Regards.

Hello again,

found another problem, after fixing the load of jquery and removing all mootools stuff from my page the images are not loading anymore.

www.isarstyle.com

any hints how to fix this?

Best regards,

Friedrich

Scripts on your page is required MooTools library. For example the next scripts:

```
window.addEvent('domready', function() {
$$('.hasTip').each(function(el) {
var title = el.get('title');
if (title) {
var parts = title.split(':', 2);
el.store('tip:title', parts);
el.store('tip:text', parts);
}
});
var JTooltips = new Tips($$('.hasTip'), { maxTitleChars: 50, fixed: false});
});
```

PS: We can recommend to check javascript error console in a browser if you have any problem with javascript on a page.

Regards,
ARI Soft

i thought the ari imageslider is working only based on jquery.. is there a solution for working without mootools?
dont want to load the 300kb js libraris on my page i dont use anywhere. (mootools core & more).

the error i have seen already in my js console, but have no idea where its coming from.. i removed all modules and
plugins based on mootools which i knew from.

"ARI Image Slider" doesn't use MooTools. Code from our previous post are included by Joomla! or 3rd party extension.

Regards,
ARI Soft

ok found the error.
so if somebody needs to remove mootools from frontend and has the same tooltip bug here is the solution.

search this file
/libraries/joomla/html/html/behavior.php

and comment this block

```
// Attach tooltips to document
// $document = JFactory::getDocument();
// $document->addScriptDeclaration("
// window.addEvent('domready', function() {
//   $$('$selector').each(function(el) {
//     var title = el.get('title');
//     if (title) {
//       var parts = title.split(':', 2);
//       el.store('tip:title', parts);
//       el.store('tip:text', parts);
//     }
//   });
//   var JTooltips = new Tips( $$('$selector'), $options);
// });");
```

Best regards.
