
Control slides individually

Posted by burnhard - 2011/12/07 12:08

Hi, we are using the ARI image slideshow on our site www.aerofit.me.

So far it works fine but it would be great if we could control exposure time + delay for each slide individually. i was hoping to solve this with the .ini file but could not find any code hints for this.

thx
burnhard

Hello,

Sorry, but the extension provides ability to set speed globally for all slides in slider. It is not possible to change this parameter for specific slides.

Regards,
ARI Soft
