No arrows, no shadow, no links - just bare image?

Posted by Speedbird - 2011/12/13 16:26

_____

Hi,

first off, thanks for this great module! I've seen it used on several friends' sites and now wanted to implement it on mine.

Unfortunately, I can't get it to work. The images do show, but there are no arrows on it, no other navigation, no shadow, nothing.

Link to the site: http://planepics.org/cms/index.php/portfolio

Following another tip here, I already gave the js folder and all the files in it full permissions (777) - still no change.

The only changes from the backend that make a change on the site is if I choose thumbnails on/off. However, if I put them on, there is also just one thumbnail of that one Insel Air plane, no other images to be seen. There are 3 more images in the same folder though...

Any guesses? Your help is much appreciated, thanks!
Best regards from Switzerland!

_____

By the way, here's a look at the source code of the loaded site.

I didn't change anything: I made an automatic install of the zip file.

Screenshot of the source code:
http://www.planepics.org/cms/slidersource.jpg

Thanks again!

_____

Hello,

Check that index.php file from site template contains the next code between and tags:

Regards,
ARI Soft

Ouch,

such a small thing, and such a huge effect.
It did the trick, thanks a lot.

I really appreciate the fast help you're providing, even more considering it's a freeware product. Thank you very much,

that's not often the case these times! Do you have any Paypal Donate thingy somewhere?

Thanks again and have a great eve!
