
Description doesn't match image

Posted by chicca - 2011/12/29 12:36

Hi

I installed the module and wrote a .ini in the folder containing my images.

When i load the page, first image is slower than the others and it can have its correct description but after the first it seems that images run more quickly than descriptions so when i see 3rd image the description is only the second and it goes on so. I have only 3 images for now but after few seconds images and descriptions are all mixed

what did i wrong?

Thanks in advance :)

Hello,

Where we can see described problem?

Regards,
ARI Soft
