
module positioning in the header

Posted by szshaps87 - 2012/01/17 03:52

I have put the module in place of the header on my website, and it is sitting in the middle of the header position. I found out, through firebug, where and what i need to edit in order to make the module move all the way to the right.

If you take a look at my site www.AllCityCarpetCare.com inspect elements (with firebug)

this is what you will see

then still using firebug, if you click on "div id" for "ais_43_wrapper" you will see the wrapper has a height and a width. After "width" if you add "float: right" you will see the slider will move over all the way to the right, it will look like this in the css

```
#ais_43_wrapper, ais_43 {  
    float: right;  
    height: 250px;  
    width: 766px;  
}
```

my problem is that i am not able to find "ais_43_wrapper" anywhere, to make the changes permanent i have tried ftp,ssh, and joomla itself.

Can someone tell me how to find the css in order to edit it please or give me another option to get the module positioned to where i would like it

=====

Hello,

"#ais_43_wrapper, #ais_43" CSS rules are generated by the module and "43" is a module ID. For another module instance it will have another ID.

In your case you can add the next CSS rule to "CSS Styles" parameter in module settings:

```
.ju-Header .ari-image-slider-wrapper  
{  
    float: right;  
}
```

Regards,
ARI Soft
