
Images \"flash\" before transition

Posted by chloev - 2012/01/25 00:12

Hi All,

I set up ARI Slider on my website which is going to go live soon. I am having the issue that the images hiccup or flash right before the transition happens. It is very annoying. I don't know if it has to do with the settings.

Feel free to check it out and see what I mean:

Hello,

Upgrade the module to the latest version (the latest version is 1.6.18, v. 1.6.8 is installed on your site). If it doesn't help, let us know and we will investigate an issue.

PS: Specify also what browser(s) do you use.

Regards,
ARI Soft
