
Image Slider not working on my template

Posted by Dconger - 2012/05/07 19:31

I am having trouble getting the image slider to work. It appears there may be a conflict with my template by Rockettheme... rt-camber. I tried using a different template and it loaded fine.

Here is a link to my page.

I will email you a temporary user name & password. I am crossing my fingers I don't have to change templates.

Hello,

When we try to open the page, we see a gray page. It appears because the page contains the next an incorrect code before tag:

Thanks a lot for the tip. It was the Rokzipper system plugin that was causing the problem. With a little trial and error, I turned it off and the image slider worked perfectly.

Cheers! :)
