
ARI Slider position on frontpage

Posted by twhitmore - 2012/05/24 08:46

Hi,
I have the slider module installed on the front page of my site <http://www.plasmatreatment.co.uk> but would like to change the position so that it appears further near to the top of the page and not at the bottom as it is now. How can I do this?
Thank you in advance

Hello,

Module positions are defined in site template, a module just can be assigned to a module position which is supported by a site template. You can see available module positions by this link.

If you want to add a new module position, contact your site template developers so they update the site template.

Regards,
ARI Soft
