Am lost - Images don\'t show - maybe jquery problem
Posted by juju - 2012/05/29 00:17

_____

Hello,
I have a big problem with ari slider.
This is my 3rd side using it but now it won't show the pictures. Its the first time with joomla 2.5.4 and this template (but tried 1.6 and this template with ari slider and it didn't work too).

ari slider is supported and comes with this template eatoreh that I am using.
take a look please.

image path ist set images/slides
that is were I put the sample pics for the slider.
could you please help me, I am desperate.
Maybe it is some conflict with another plugin although I didn't add anything besides what came on default.

Thanks

_____

Hello,

This problem with file permissions of images which are loaded into the slider. If you try to open an image into a browser, 403 HTTP error occurs. Set correct file permissions for images.

Regards,
ARI Soft

_____

Hello,
thank you so much! I haven't thought of that.
Works like a charm now. Great support!
Thanks.
