
Slider don't move

Posted by deefken - 2012/11/04 10:31

Hello,

I'm using the ARI Image Slider on my own website and it works awesome!

When i want to install the slider on another joomla 2.5 website, everything works fine, i can add and set an image folder to load the images from. The image shows up, but it don't move or do anything :(

I did the same than on my own site but the slider don't move, it only shows 1 image (i have 4 images in that image folder but it just won't work :(

Can it be that i do something wrong?

The site is www.beerensdomotics.be/beerens (you have to be on the /beerens part because the root domain is a static html site (no joomla))

thanks!

Kind regards

=====

Hello,

It seems this problem with your site template. Check that index.php file of site template contains the following code between and tags:

Regards,
ARI Soft

omg!

Thanks! this solved the issue! :)

I build my own template from zero but didn't knew that this element had to be added :(

My layout is a bit messed up now but that i can fix i guess :)

Thx for the very quick support!
