Adding frame (mask) to slider
Posted by topy - 2012/11/06 10:59
_____

Hy,

How can i add a frame (mask) for slider?

_____

Hello,

Could you explain in more details what do you mean? Do you mean "ARI Image Slider" or "ARI Slider" extension?

Regards,
ARI Soft

_____

Decrease width to of the slider to 898 (it is necessary to resize image too) or increase width of container in site template and add the following CSS rule:

#latestnews .ari-image-slider-wrapper
{
 border: 1px solid yellow;
}

Can u please check this site out
GusDoeMatik

I'm trying to put a frame/mask on the slider... It sort of works.. but the frame is behind the slider I want it on top...

How can I do this?

this is my CSS

._gdm {
 background: url(images/layoutObjects/cityGrungeFrame.png) no-repeat;
 width: 971px;
 height: 480px;
 margin-right: auto;
 margin-left: auto;
 padding-top: 73px;
 padding-left: 10px;
 display: block;
}

Ok I learned how to do this myself.. lol and I don't know coding...

So for anyone that wants to do this I have a step by step instruction guide.

First you need to locate this file:
modules/mod_ariimageslider/tmpl/default.php

We are going to edit this file by adding 2 divs into this file.

so find and locate:
$theme = $params->get('theme');
if (empty($theme))
 $theme = 'default';
$controlNav = (bool)$params->get('opt_controlNav');
?>
right after that line of code insert this:

_____

Also 1 more thing... I tried to save the CSS that I made into a custom theme and it won't work!!! :angry: :angry: :angry:
:angry:

But it works if the Custom CSS is placed in the module... I think that should be fixed too to some how force joomla to
read the theme CSS before anything else that way it will display... and that way i can save all my themes in the and save
me time... plus themes could be shared...

_____

Hello,

Where do you save your CSS styles and what exactly doesn't work?

_____

I save my CSS in the actual ARI ImageSlider module itself... cause if I save it in the CUSTOM template CSS the image
for the frame doesn't load... Don't know why... I checked to see if the url to the image was correct and it is... so my only
solution was to put the CSS in the module...http://GusDoeMatik.com/LittleSnapper/Safari.jpg

Provide a link to a page where we can see the slider and the problem. Specify also path to CSS file which you mean.

Regards,
ARI Soft

I'm sorry for the miscommunication, I had solved the problem even before you answered... If you read that very long post
it explains the solution...

The next little post was stating that I wish you (ARI) would insert that little bit of code that I used to solve the issue into the actual plugin...

AND I wish you fix the issue where I could save the custom CSS into the ARI Image Slider template that way I could make different frame TEMPLATES. That way it'll be easy to switch between frame designs with a click...

Well I just solved that issue too and it wasn't the plugins fault.. it was the permission settings on the image folder inside the template folder... I had to set it to 745... that made the frame load... So now I can make different templates...

But now I have another issue... LOL

OK Now that I can save the custom CSS into the template file... My issue is that the custom TEMPLATE is only good for one module because the custom css is based off the unique ID that your plugin creates for each slider...

Example:

#ais_104_frameHolder {
width: 971px;
height: 460px;
position: relative;
margin-right: auto;
margin-left: auto;
top: 30px;
}

The ais_104 part of the CSS is generated automatically by your code

_____

Don't use elements ID in CSS rules, use CSS class names.

OMG I figured it all out!!! :woohoo: :woohoo: :woohoo: :woohoo: :woohoo:

But in order for it to work I had to change things around just a tiny bit...

Originally I had inserted these 2 divs in the the default.php file (modules/mod_ariimageslider/tmpl/default.php):

==
