
ini.file

Posted by sorengryttom - 2013/02/28 18:37

Hey. I changed in the ini file, but neither the text or link that appears on the web page. Can someone explain how I should do. Do I have to upload each image in the image path. I have just entered the path to example: images / images. SÅ¶ren :huh:

Hello,

INI file should be located in folder with images. If something doesn't work, provide a link to a page where we can see a problem and screenshot(s) of module settings page by email.

Regards,
ARI Soft

Sorry for the Swede but here comes the question in English.

should I make a new rule in the Nivo-slider.css? I found the following css Nivo-slider.css in the following directory. mode-ariimageesslider/js/themes, or should I create a new CSS rule. :huh:

You can add custom CSS rules to "CSS Styles" parameter in module settings or to a site template CSS file.

It worked, now is the text on the center of the image to the left and it's on a black background that I do not want, it should be transparent. I want the text to be larger. Do you have any suggestions?

I use it locally. I want it to work before I put it out in real-life situation. I can take a print screen of how it looks. I attach it to your forum.

The picture huh too big, so it could not attach. Can I attach it to a email?

I look at your website and see demo for ARI Images Slider to display texts naming the pictures as examples nature 06th I changed the ini file, so that an image is the text I want. I've tried to add instructions for the other pictures, but then appear no text at all. Can you help me with some tips on how I'm doing. By default, I have the path to the images like this images / forimp where the images is in map forimp. Please help me.

regards Soren :(

Yes, it works, but I have two others that I want to work in the same way. pellets and wood. It should be possible to click on the image in order to get to the store, to order the product.

Add new titles and links to INI file. See sample INI file:

```
bread.jpg="This is a bread"
coffee.jpg="A cup of coffee"
pic.png="Sample image"
```

```
coffee.jpg="http://demo2.ari-soft.com"
bread.jpg="http://www.ari-soft.com"
```

```
coffee.jpg="Coffee"
pic.png="Image"
```

Regards,
ARI Soft
