
Blue image when hovering linked image

Posted by alex0703 - 2013/03/11 12:51

When I hover on an image linked to an article the image turns into a blue image. The link is functioning well, but I don't like the blue image. See www.dekaleberg.nl.

Is this normal behaviour or can I adjust the parameters?

I'm using the Beez_20 template with Joomla 2.5..9. http://www.ari-soft.com/images/fbfiles/images/Schermafbeelding_2013_03_11_om_13.png

Hello,

This is not a standard behavior of the extension. This problem with site template styles. See the following CSS rules in /templates/beez_20/css/personal.css file:

```
#main a:hover,
#main a:active,
#main a:focus
{
    background:#095197;
    color:#fff;
}
```

1. Not all images are linked to articles; only the ones with "Klik op foto" in the text.
2. I see it in Firefox, Chrome and Safari on a Mac.

So I need to change the template?

Add the following CSS rule to fix the problem:

```
#main .ari-image-slider-wrapper A
{
    background-color: transparent !important;
}
```
