
right navigation arrow is missing

Posted by flex - 2013/04/02 07:57

Hi

I am not sure what is the problem but everything was working fine until few hours ago. Now the slider shows only the left navigation arrow and I can click on it and it works fine but I am missing the right arrow and I cannot go back and forth. I appreciate any help. I am using the latest ari image slider package with Joomla 3. You can check the issue on <http://hotelglam.com/novsite/>

Hello,

Set "Responsive" parameter to "Yes" or resize images to correct width and set "Width" parameter to 828 in module settings.

Regards,
ARI Soft

Can you please tell me where can I find this Set "Responsive" parameter to "Yes" . Also the current module is set 980 for width, the pictures are also set to that width is that a problem?

"Responsive" parameter is available in module settings:

<http://www.ari-soft.com/images/fbfiles/images/responsive.jpg>

Maximum width of container element which is defined in site template is 828 pixels so the slider is cut off.
